

Six-Step Ethics Process

Using the Ethical Framework and Six-Step Process

Working through the ethical framework provides us an opportunity to consider ethical issues, which can help clients, families, staff and volunteers reach the best decision for them when faced with difficult choices.

Careful consideration and deliberation is required in order to appreciate and respect client autonomy and rights. It is critical to tailor interventions to individual preferences as much as possible while acknowledging the values of all team members.

Shannex strives to provide all individuals with the most appropriate care possible within acceptable circumstances.

For additional information on the six step process, please contact the Charge Nurse/Manager or visit shannex.com.

Ethics

In care environments we find ourselves in situations that call for thoughtful consideration about the way we care or how we feel we should care for each other. To address these situations we follow an ethical framework that assists us in working through the process of arriving at a recommendation.

Examples of ethical situations in care environments include:

- Individuals choosing to live at risk from falls
- Declining recommended treatments
- Families disagreeing with an individual's choice
- Clients requesting transfers for other clients
